**Bradford Angier : How to Build Your Home in the Woods (Log Cabins, Camping Shelters, Rustic Furniture)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised How to Build Your Home in the Woods (Log Cabins, Camping Shelters, Rustic Furniture):

4 of 4 people found the following review helpful. Fascinating and InspiringBy johnHkennedyI bought this book after reading about how the founder of Base Camp X built his cabin in the woods using only an ax and some rope. This book shows you how anyone can build their own home with a limited set of tools and no specialized skills. I truly could not believe how thorough and simple the instructions and techniques illustrated in this book were. After reading, I feel perfectly capable of heading off to the woods and building a home.Unfortunately, the book is slightly out of date. Neither Alaska, nor Canada are offering free land to all comers so there is a bit more involved in the process than there was when this book was written. Still, I know what I will be doing when I retire.5 of 5 people found the following review helpful. A Rare Classic on Country LivingBy Roger W. EkI was very pleased to find this used volume in excellent condition.I loaned my old one years ago and won't loan this one. Why only four stars? Some may find it dated, but it provides time honored info for basic shelter built with hand tools only. The time could come in our country when such info is life saving.4 of 4 people found the following review helpful. A bit of memorabiliaBy Laurel PritchardWe had a copy of this book when we went "back to basics" in 1969, and can testify that if we could build a home in the woods with this book (and we did --- with no skills and very few tools), ANYBODY could do it. The problem today is that building codes would prohibit most of the methods and even materials recommended, and logs,

despite conventional wisdom, provide very poor insulation compared with a code-insulated frame wall. But it got us started and we've been building ever since!

A profusely illustrated volume which shows how to build log cabins, camping shelters, cabins without logs, and rustic furniture. Economy and simplicity are stressed. With a host of working drawings and practical illustrations demonstrating every step, this is the definitive book on the subject. This volume will be of great interest to hunters, fishermen, campers, and outdoorsmen of every stripe.
