First of all, it is a large book, full of information and a ton of beautifully descriptive color photos. It is well-written and reads clearly. It contains helpful, common sense advice, and the color photos further aid in the descriptions. It includes information on the dangers of gardening with toxic chemicals, and why organic gardening is more effective and better all around. It also goes into the environmental influence of toxins, that you may not have thought about. The author explains gardening terms clearly, in case you are not fully familiar with them. It even contains important guidelines for using pH to your advantage, as well as a collection of homemade product recipes. From working at a plant nursery in the past, I recognize a good deal of the advice in this book to be true and well-agreed upon. The author obviously has the personal experience, as well as generations of family experience, to back up the information in this book. I personally, still have a lot to learn in order to be a successful gardener. I always seem to kill my plants; all but my hearty jade and spider plants. I will be using this book in order to create a lush, healthy, fruitful garden. Great Work Margaret!

Every detail is carefully written to take the guess work out of crating the perfect organic garden that fits your needs. My favorite section by far is the section on what to plant. Popular choices in a garden (various herbs veggies such as beans, cabbages, and even some dual purpose flowers) are carefully outline. The section takes care to be specific about what plants haould be planted with or near what other plants as well as the types of pest the plant aids in repelling. This guide is comprehensive and covers all bases of a healthy pesticide fee garden whether it is for recreational use or something more. Even if you aren't starting an organic garden complete with compost, this book is great if for no other reason then while choosing which plants to add to your garden for their various uses. Loved this guide! I've already recommended it to a few of my friends who are avid gardeners and now I'm recommending it to you!
