1 of 1 people found the following review helpful. Excellent reference and motivator By Lisa Seeger I am SO HAPPY that I purchased this book! I am a mom of two elementary school children and we (as a family) are diving into helping with our environmental center at our school. This book has helped to get things moving along has helped to organize ideas that can be passed to our committee from year to year. It gives a solid section on understanding the schools as well as the students needs. Another section explains very important balance of cultivating volunteers (not just the ground). It has very down to earth writing; great examples and a list of resources that I am finding indispensable. I am purchasing a full print copy to be added to our library within our school as well. Definitely worth the price and the

time to read! 1 of 1 people found the following review helpful. Mandatory reading for starting or existing school gardens! By singing in the rain (Los Angeles) I found this book, from beginning to end, easily accessible. I literally could not put it down and didn't, until I finished. Then I went back and tagged topics I wanted to refer back to. Of those, chapter 5 - 6 - 7 - 8 9! Everything! I loved Kindergarten Scope and Sequence, Connecting the garden to the curriculum, the section on journaling, managing the outdoor classroom, the weekly schedule, all the wonderful activity ideas. In fact, flipping through the book again right now to review what I marked, makes me want to re-read it again. Since reading this book, my time in the garden with our students has been more productive, organized and fun! 11 of 11 people found the following review helpful. Fantastic Resource! By Brynna Vogt This is a great resource that takes you step by step through the creation of a garden, from red tape to fundraising to actually planting. It also emphasizes how to build community, parent, teacher, and student support and buy-in. It was fun and easy to read. Loved it!

A school garden is a tremendously valuable tool to help young people turn book knowledge into real experience. This book is a must-have resource for anyone considering embarking on a youth gardening adventure. Mike Metallo, President, National Gardening Association In this groundbreaking resource, two school garden pioneers offer parents, teachers, and school administrators everything they need to know to build school gardens and to develop the programs that support them. Today both schools and parents have a unique opportunity and an increasing responsibility to cultivate an awareness of our finite resources, to reinforce values of environmental stewardship, to help students understand concepts of nutrition and health, and to connect children to the natural world. What better way to do this than by engaging young people, their families, and teachers in the wondrous outdoor classroom that is their very own school garden? It's all here: developing the concept, planning, fund-raising, organizing, designing the space, preparing the site, working with parents and schools, teaching in the garden, planting, harvesting, and even cooking, with kid-friendly recipes and year-round activities. Packed with strategies, to-do lists, sample letters, detailed lesson plans, and tricks of the trade from decades of experience developing school garden programs for grades K8, this hands-on approach will make school garden projects accessible, inexpensive, and sustainable.
