Hydroponic gardening, the art of growing plants without any soil, is a method already used by millions for growing healthy, vibrant plants by everyday gardeners. In Greek, hydro translates to water and ponos translates as labor, meaning that your garden lets the water do the work of feeding nutrients to your plant no soil necessary. This technology allows your plants to grow with nutrient solutions, with its roots free or supported by peat moss, sawdust, or gravel. You don't have to be a professional horticulturalist to learn how to grow soil-free in your own home. For anyone who was ever turned off by traditional gardening because of inconvenience or messiness, hydroponic gardening offers an attractive and practical alternative. Your fruits, vegetables, flowers, and other foliage can flourish without their roots being buried unnecessarily in layers of restrictive, water-wasting soil.
