I'm convinced it was written by a repurposed Commodore 64 programmed to scrape basic articles on hydroponics, run the compiled results through a thesaurus, feed it into and back out of a foreign language owner's manual translation script, and assemble the results into something resembling a human-readable first-draft manuscript. It hurts your head to try to read it.Save your money, browse some online articles, and buy something more in-depth. I would give it zero stars if I could.
