Mathew Noll : Hydroponics: Your First Hydroponic Garden Made Easy (Hydroponics for Beginners, Hydroponics Gardening) before purchasing it in order to gage whether or not it would be worth my time, and all praised Hydroponics: Your First Hydroponic Garden Made Easy (Hydroponics for Beginners, Hydroponics Gardening):

1 of 1 people found the following review helpful. Poorly edited. Very generalized and vague content. By Dissappointed
This e book grammatically reads like a translated web page and the content is written at a very basic level. It is almost like reading a child's book report. If your aim is to actually create a functional hydroponic system, this book will not help you in the least. What can you expect for free?
0 of 0 people found the following review helpful. Great idea, great book and great guidelines
By Joe Waber
When the whole world is busy wasting energy and resource, effort like this can generate hope for the future. This book deals with the idea of sustainability and paints a whole picture of a closed ecosystem based garden where fish and plants can get mutual benefits. The idea itself is very old but the practice is very recent in both household or commercial field. We should really be encouraging books like this and put effort to create more interest in practicing eco friendly and self sustaining system like aquaponics.

By Tony Robson
I really enjoyed this Aquaponics guide that showed me exactly how to build my first aquaponic garden. The techniques are simple and effective, and I can proudly say that I know how to grow an aquaponic garden easily and effectively. I will be sharing this simple guide to friends and family so they too can start!

Grow Your First Hydroponic Garden! You might have seen beautiful designs of inside gardens somewhere with some strange looking balls in the pot and wondered what kind of gardening is this! There is practically no soil required to cultivate plants with hydroponic systems. That is why; you had noticed that those strange looking gardens were so clean. Yes, it is true. You can actually grow plants without soil. The modern day science has refined an age old technique which is going to be a reality for the masses soon. Hydroponic systems are made such that you can install them in your home, backyard, even on your terrace and grow plants of your favorite plants and vegetables.
