M Forrest : Landscape Trees and Shrubs: Selection, Use and Management (Cabi) before purchasing it in order to gage whether or not it would be worth my time, and all praised Landscape Trees and Shrubs: Selection, Use and Management (Cabi):

This book presents a horticultural overview of the main plant families of trees and shrubs from temperate regions that are cultivated in urban and rural landscape schemes. Most of the plants used come from a limited number of plant

families and within these families, certain genera contribute very significantly. The largest chapter in the book describes 37 plant families according to their identification, functional use and management in landscape schemes. With this information, readers will be able to assess the suitability of species and prepare planting designs for prevailing sites.

"A good reference to have on the shelf; it will be useful for the professional and student alike." (Compass) About the Author Mary Forrest, School of Biology and Environmental Science, University College Dublin, Ireland.
