M. J. Jefferson-Brown : Leaves: For All-Year Round Colour and Interest in the Garden before purchasing it in order to gage whether or not it would be worth my time, and all praised Leaves: For All-Year Round Colour and Interest in the Garden:

Suggesting how you can use different foliage to make a more beautiful garden, this book examines trees and shrubs, herbaceous and annual plants, bulbs, grasses and ferns, waterside plants and ground cover. Plant habitats, seasonal variations and the cutting and drying of foliage are also discussed.

From Library JournalThe British author of 12 gardening books here turns his attention to the use of foliage in a garden plan. Many gardening books concentrate on the relatively brief flowering phase of a plant's life cycle and neglect the landscape impact of leaves. General design information and advice on using foliage effectively through the seasons is provided, but the book's chief value is as a catalog of plants with interesting foliage. Trees, shrubs, ferns, and grasses are included, along with plants for wet areas, walls, and small spaces. Flowering plants are included only if their leaves have interest. Larger and more comprehensive gardening collections should purchase this.-Peter C. Leonard, Mt. Lebanon P.L., Pa.Copyright 1989 Reed Business Information, Inc.
