J. Zulaika, F. J. Campa, L. N. Lopez De Lacalle : Light Machine Tools for Productive Machining (Mechanical Engineering Theory and Applications) before purchasing it in order to gage whether or not it would be worth my time, and all praised Light Machine Tools for Productive Machining (Mechanical Engineering Theory and

Applications):

Presents 'machine and process' approach that is based on stability lobe diagrams for designing large-volume milling machines bearing in mind their productivity, reliability and accuracy as well as their eco-efficiency. This book introduces a global modelling of the dynamics of milling machines.
